

Attorney Docket No.: 22130.0003U2  
Application No. 10/008,501

**In the Claims**

Please amend the claims as indicated.

1. (Currently amended) A method of destroying volatile organic compounds (VOCs) comprising the steps of:
  - collecting air laden with the VOCs;
  - compressing said VOC laden air in a compressor;
  - providing a primary fuel stream;
  - combusting said primary fuel stream in a combustor to create a first stream of combustion gases;
  - directing said first stream of combustion gases to a reaction chamber;
  - directing said compressed VOC laden air into said reaction chamber to create a second stream of combustion gases;
  - reacting said first and second streams of gases to ~~for~~ substantially destroy said VOCs ~~VOC's~~ and create a resulting stream of combustion gases;
  - directing said resulting stream of combustion gases to drive a power generator; and
  - recovering power from operation of said power generator.
2. (Original) The method of claim 1 further comprising the step of:
  - controlling the flow of said collected VOC laden air and said primary fuel stream to maintain a substantially stoichiometric reaction in said reaction chamber.
